
The third round looks at the design as a whole.

DESIGN Thank you for sharing your thoughts and providing variations of क. It's interesting and I would like to suggest another variation. I like your take on adding contrast in vD but I am afraid the ExtraLight Deva would turn a bit too heavy compared to the ExtraLight Latin. What about shaving off some more weight in vB and vC? and that way creating a similar contrast as in vD, but overall lighter. It would be nice to look at small paragraphs of text comparing those variations on a single page.

— त is making a little noise; it does not look as strong as ल, to my eyes. Its tension is too rounded, geometrical. — The endings of र, २ and स are going unnoticed; that makes them glue better to the rest of the glyphs. — क has something about its balance. I wonder if the left side ball is just maybe a tad too large. Would that help legibility to have क with a smaller left side? and ख as well. — ढ is very geometric and simplified. If the pen stroke is evoked, ढ could lose some of its rationality and be more developed.

SPACING The spacing doc has a very large array. Would it possible to look at just a few strings with targeted letters? Here are the strings I have for instance in mind:

— भाभाभाभाभाभाभाभा + पापापापापापापापापा + मामामामामामामामाम + गागागगागागागागागा।
etc. — ठठाठाठाठाठाठाठा + काकाकाकाकाकाकाका + तातातातताताताताता +
छाछाछाछाछाछाछाछा। etc. — गककगकगकगक + मकमकमकमकमकमकमक +
पकपकपकपकपकपकपक + भकभकभकभकभकभकभक। etc.
